TRASH RECEPTACLE AND PLANTER
FAUX WOOD

customer service:

ASSEMBLERS: If you find any parts missing or damaged, or if you're having difficulty assembling your furniture/equipment, call us at:

* Before calling, have your product model number available.

1-800-253-8619 (Inside U.S.A.)

260-352-2102 (Outside U.S.A.)

Monday thru Friday,
8:00 AM - 4:30 PM Eastern Time
(EXCEPT HOLIDAYS)

maintenance:

Regular inspection and maintenance of all parts, and fasteners is necessary. Tighten all bolts and nuts. Inspect Tops, Seats, Legs, Braces and Fasteners periodically for wear or vandalism. Replace broken or worn parts immediately or take equipment out of service until repairs are made. Use genuine Urbanscape replacement parts.

KEEP THIS ASSEMBLY/SPECIFICATION SHEET FOR FUTURE REFERENCE.

specifications:

NOTE: We reserve the right to change specifications without notice.

Framework assemblies are finished with powder coating; electrostatically applied and oven cured according to powder manufacturer's specifications. Fasteners are stainless steel to resist corrosion.

RECEPTACLE AND PLANTER LEGS:

Legs are constructed of 2 square extruded aluminum tubing. End caps are 319 aluminum cast. Threaded inserts are aluminum Rivnuts.

RECEPTACLE AND PLANTER:

The vertical rails are constructed of 1/2 x 1 3/4 and the horizontal are constructed of 1 1/4 x 2 extruded aluminum tubing. Mounting brackets consists of 1/8 aluminum strips. The floor support angles consist of 3/4 x 3/4 x 1/8 aluminum. The floors consist of 1/8 aluminum sheet. Threaded inserts, Rivnuts, are located on one panel for hinged top on receptacle.

RECEPTACLE TOP:

The top panel consists of 1/8 sheet aluminum. Perimeter framing is of 1/8 aluminum strips and framing around square hole is 3/4 x 3/4 x 1/8 aluminum angle.

GENERAL:

Planter ground space requirements are 28 3/4" x 29 3/4". The height of legs are 24 1/4" and the height of panels are 22".

Receptacle ground space requirements are 26 1/4" x 27 1/4". The height of legs are 35" and the height of the panels are 32 3/4". Opening of top is 10" square.

NOTE: Minor scratches to the faux-wood furniture can be touched up using Wood Finish Touch-Up markers or pens. Some recommended touch-up markers are the MINWAX WOOD FINISH STAIN MARKERS. The cherry marker works well with the wheat faux-wood, the Provincial marker closely matches the weathered and italia, and the Dark Walnut marker matches the espresso faux-wood. The touch-up markers can be obtained at a local hardware store or may also be obtained through Urbanscape by contacting customer service.

Finished to Look Like Wood, but Act Like Metal

Our faux-wood finishes so closely resemble the real thing that it's hard to believe it's metal and not wood. The timeless beauty and tradition of wood without any of the headaches, such as cracking, warping or rotting. For superior strength and rigidity, we add reinforcements to the aluminum extrusions for all of our faux-wood-finished products.

AAMA 2604-05 Certification

Our seven-step powder-coat system exceeds AAMA 2604-05 (American Architectural Manufacturers Association) test specifications—one of the highest in the industry. Our coating stood up to some of the toughest test specifications, including adhesion, abrasion resistance, chemical resistance, corrosion resistance and fade resistance, to ensure that our products will last longer than anyone else's.

AAMA 2604-05 test Procedures and Performance Requirements

| Test Requirements | Compliance |
|---|------------|
| Salt-Spray Resistance: 3,000 hours per ASTM B 117 | Yes |
| Weathering: Color Retention, 5-year south Florida sun, per ASTM D 2244 with a maximum 5deltaE change | Yes |
| Weathering: Chalk resistance, 5-year south Florida sun, per ASTM D 4214 with a max rating of 8 | Yes |
| Weathering: Gloss Retention, 5-year south Florida sun, per ASTM D 523 with a min of 30% | Yes |
| Weathering: Resistance to Erosion, 5-year south Florida sun, with less than 10% film loss | Yes |
| Chemical Resistance: Muriatic Acid, Mortar, Nitric Acid, Detergent and Window Cleaner | Yes |
| Dry Film Hardness per ASTM D 3363 with no rupture | Yes |
| Adhesion: Dry Adhesion, Wet Adhesion and Boiling Water Adhesion using the cross hatch method with 0% failure | Yes |

Seven Steps to Long-Lasting Furniture: Our Superior Powder-Coating Process

What's responsible for the good looks and durability of all our products? Our seven-step powder-coating process, which is unlike any other in the industry. While other companies also offer powder-coated products, our seven-step process ensures the highest quality and longevity for our products.

STEP 1—Shot-Blasting to White Metal

First, all of our metal is cleaned to white metal. We strip it to its purest form using our state-of-the-art shot-blast system. This process removes all the impurities from the metal, especially at the weld joints. It's more effective than traditional acid cleaning and also creates a more textured surface, allowing for better adhesion of the powder coat.

STEP 2—Five-Stage Chemical Pre-Treatment

Next, the metal goes through a five-stage chemical pre-treatment cleaning process. It is etched, rinsed and cleaned to eliminate any residue, then it's sealed—further promoting adhesion and encouraging corrosion prevention.

STEP 3—Pre-Heating

Prior to coating, the part is pre-heated so that it can be dried, warmed and then sent directly to the spray booth. With the part heated, it draws powder into the joints, corners and hard-to-reach places to ensure complete coating of the entire surface.

STEP 4—Zinc-Rich Epoxy Coating

After the pre-heating, a Zinc-Rich epoxy powder-coating is applied to provide the highest quality of corrosion control. It works as a prime coat to protect the metal from corrosion before it receives its topcoat.

STEP 5—Zinc-Rich Epoxy Coating Gel-Cure

Next, the Zinc-Rich epoxy coating is cured to a gel, allowing the polyester topcoat to combine with the Zinc-Rich epoxy, promoting better adhesion.

STEP 6—AAMA 2604-Compliant Polyester Topcoat

A polyester topcoat is then applied that's specially formulated to meet AAMA 2604 standards for fading, cracking, chalking, gloss retention, erosion resistance and chemical resistance. No one else in the industry uses this high standard of topcoat. It ensures that our products will maintain their beauty and durability for years to come.

STEP 7—Final Cure

Finally, the metal goes through a cure oven, which hardens the topcoat and completes the integrated bonding between the Zinc-Rich epoxy and AAMA 2604-Compliant Polyester Topcoat.

assembly procedures: IMPORTANT: Assemblers should be reasonably skilled in the assembly of commercial grade/heavy duty fabricated steel equipment.

To ensure proper assembly, it is suggested that you take adequate time to locate and identify each part. To prevent scratching of the finished pieces, we recommend this unit to be assembled on a clean, flat, solid, surface with a drop cloth, allowing plenty of working room. Also please read the instructions and study the sketches very carefully. A little extra time spent before assembly will be well worth it in performing a complete, proper assembly. Please note that all parts have been pre-cut and pre-drilled.

During the assembly process leave all bolts and nuts "finger tight", until the entire unit is completely assembled. This allows room for movement to level or adjust all seats, tops, benches, framework and braces if necessary. After final adjustment and leveling, permanently tighten all nuts, bolts and fasteners. Glides are not to be used when surface mounting the unit.

76

STEP 1

Attach first panel (16100) to legs (16100 R/L) using one (M8 x 30 Hex Bolt) and one (Split Washer) per each bolt hole. Attach second and third panels to the same legs mentioned previously (16100 R/L) using one (M8 x 30 Hex Bolt) and one (Split Washer) per each bolt hole. Hand tighten only.

STEP 2

Bolt the two remaining legs (16100 R/L) to the second and third panels using one (M8 x 30 Hex Bolt) and one (Split Washer) per each bolt hole. Insert trash receptacle floor into assembled frame and bolt to the three panels using one (M6 x 25 Hex Bolt) and one (Flat Washer), and (Split Washer) and one (M6 Hex Nut) per each bolt. Hand tighten only.

STEP 3

Attach fourth panel (16100) to legs (16100 R/L) using one (M8 x 30 Hex Bolt) and one (Split Washer) per each bolt hole. NOTE: Be sure to place floor support on panel under floor prior to bolting. Bolt floor to panel using one (M6 x 25 Hex Bolt) and one (Flat Washer), and (Split Washer) and one (M6 Hex Nut) per each bolt. Hand tighten only.

STEP 4

Level all parts. Tighten legs to panels first. (SEE NOTE BELOW) Tighten floor to panels using proper tools.

NOTE: TIGHTEN BOLTS TO 35 FT LBS EACH.

installation: WARNING: The proper installation for products may depend upon many factors unique to the site, location, or use of a particular product. Consult with your contractor or other professional to determine your specific installation requirements.

assembly procedures (con't):

STEP 1

Attach panel w/ lid support tabs (16101) to legs (16101 R/L) using one (M8 x 30 Hex Bolt) and one (Split Washer) per each bolt hole. Attach panel (plain) and panel w/ cable attachment to the same legs mentioned previously (16101 R/L) using one (M8 x 30 Hex Bolt) and one (Split Washer) per each bolt hole. Hand tighten only.

STEP 2

Bolt the two remaining legs (16101 R/L) to the plain and cable attachment panels using one (M8 x 30 Hex Bolt) and one (Split Washer) per each bolt hole. Insert trash receptacle floor into assembled frame and bolt to the three panels using one (M6 x 25 Hex Bolt) and one (Flat Washer), and (Split Washer) and one (M6 Hex Nut) per each bolt. Hand tighten only.

STEP 3

Attach panel w/ hinges (16101) to legs (16101 R/L) using one (M8 x 30 Hex Bolt) and one (Split Washer) per each bolt hole. NOTE: Be sure to place floor support on panel under floor prior to bolting. Bolt floor to panel using one (M6 x 25 Hex Bolt) and one (Flat Washer), and (Split Washer) and one (M6 Hex Nut) per each bolt. Hand tighten only.

STEP 4

Attach Lid to panel w/ hinges (16101) using six (M4 x 12 Flat Head Phillips Screws). Attach one end of cable to panel and the other end to lid using one (M8 x 30 Hex Bolt) each end. Tighten with proper tool.

STEP 5

Level all parts. Note: Tighten legs to panels first. (SEE NOTE BELOW) Lower lid to closed position and square-up lid with the panels. While one person is holding lid in position, a second person tightens floor to panels using proper tools.

NOTE: TIGHTEN BOLTS ON LEGS TO 35 FT LBS EACH.
